EBC Childcare Center Web Development & Mobile Application

Student: Kristin M. Spearman

Faculty Advisor: Vikram Sethi

This capstone project involved a website, on-line information request and a mobile application for the EBC Childcare center. This website and mobile application increased the enrollment of the childcare center by providing more information for the parent to determine if EBC is the perfect center for their children. Everlasting Missionary Baptist Church does not use much technology and does not really have a data system that electronically; the church decided to start small but creating a church website as well as the Childcare center website with an on-line request information page. EBC Childcare Center have been up and running for about 10 years, but would love more enrollment to increase their revenue. The development of this website will make it easy for parents and staff members to access the website for review; but the information that is submitted by the parent will be secured and safe stored within the computerized data platform provided by the operations manager within the church.
