This Syllabus is brought to you for free and open access by the College of Engineering and Computer Science at CORE Scholar. It has been accepted for inclusion in Computer Science & Engineering Syllabi by an authorized administrator of CORE Scholar. For more information, please contact [corescholar@www.libraries.wright.edu](mailto:corescholar@www.libraries.wright.edu).

**CS 470 / 670  
System Simulation  
Spring 2011**

**Instructor:** Dr. M. M. Rizki  
**Office:** 303 Russ Engineering  
**Hours:** Tuesday and Wednesday 4:30-5:30 PM  
and by appointment  
**Phone:** 775-5128  
**Email:** mateen.rizki@wright.edu

**Textbooks:**

Simulation Modeling and Analysis (4th Edition)  
by A. M. Law and W. D. Kelton, McGraw-Hill, 2007

**Course Requirements:**

Simulation Exercises ( 2 @ 15% )	30%
Simulation Project	30%
Examinations ( 2 @ 20%)	40%

**General Policies:**

1. Projects are due at the time posted in Pilot. Assignments not submitted by due date will be accepted up to one week late at a penalty of 25%. The final project must be submitted on the due date -- no late final projects will be accepted.
2. Projects will be graded based on (1) quality of the simulation analysis, (2) correctness of the results, and (3) quality and readability of the code. Code that does not compile or produces serious run time errors will receive a grade of zero.
3. Homework may be assigned periodically. It will not be graded, but similar problems will appear on your examinations so it is to your advantage to attempt each homework problem.
4. Students registering for CS 670 will be asked to perform additional work on each assignment. As always, graduate students are expected to produce superior quality work!
5. Questions, discussion, and debate are strongly encouraged.

**Course Outline:**

1. Basic Simulation Concepts	L&K	1.1-1.4, 1.7-1.9
Simulation Methodologies	L&K	2.1-2.4, 2.8
2. Introduction of Python and SimPy	Handouts	
3. Building Valid Simulations	L&K	5
4. Probabilistic Aspects of Simulation		
Review of Probability	L&K	4
Random Number Generators	L&K	7
Random Variates	L&K	8.1, 8.2, 8.3.1-8, 8.3.15-16, 8.4, 8.6
5. Statistical Aspects of Simulation		
Selecting Input Distributions	L&K	6
Analysis of Output	L&K	9.1-9.5
6. Comparing Alternative Configurations	L&K	10
7. Variance Reduction Techniques	L&K	11
8. Experimental Design	L&K	12.1-12.3
9. Simulation Languages	L&K	3
