CS 3180/5180 Comparative Languages

- **Instructor** : T. K. Prasad
- **Phone No.** : (937)-775-5109
- **Email** : t.k.prasad@wright.edu
- **Home page** : http://knoesis.wright.edu/tkprasad/

- **Quarter** : Summer, 2013
- **Class Hrs** : MW, 1:30 - 3:10pm, 145 Russ Center
- **Office Hrs** : MW, 3:15 - 4:00pm, 395 JC (or by appt.)

Course Description

This course will introduce fundamental concepts and paradigms underlying the design of modern programming languages. For concreteness, we study the details of an object-oriented language (e.g. Java, C#, C++), a functional language (e.g., Scheme), and get introduced to multiparadigm languages (e.g., Python, Scala). The overall goal is to enable comparison and evaluation of existing languages. The programming assignments will largely be coded in Java and in Racket (formerly, Scheme), and optionally in Python or Scala.

Prerequisites

- Data Structures and Algorithms. (Equivalently, CS3100/5100.)
- Experience with programming in imperative languages such as C/C++, Pascal, or Ada.

Course Material

1. On-line Lecture Notes.
2. OOP Basics

Course Load

The course load includes programming assignments worth 30 points, a midterm worth 30 points and a final worth 40 points. Normally, graduate students are assigned additional homework problems and are expected to solve additional/different problems in the tests.

Grading

The letter grades will be assigned using the following scale: A[90-100], B[80-90), C[70-80), D[60-70), and F[0-60). However, I reserve the right to adjust the scale somewhat to utilize the gaps in the distribution. Academic dishonesty will be "rewarded" with a grade of "F". "Sharing/reuse" of solutions to assignment problems is strictly prohibited.

Attendance Policy

All registered students are expected to attend all lectures. In case a student is absent from a lecture due to unavoidable circumstances, the student is still responsible for the material covered in the class, as it is typically available from the course web-page well in advance. Furthermore, the student is expected to find out about in-class announcements from their colleagues/instructor.

Class Schedule and Syllabus

(The following class schedule is based on normal semester classes which are 1hr 15min long. The content will be covered distributed in a different way and covered at a different rate in the summer semester when the classes are 1hr 40min long.)

Topic

Class 1	Evolution of Programming Languages
Class 2	Syntax Specification : Grammars
Class 3	Object-Oriented Programming
Class 4	(continue)
Class 5	Symbolic Data; List Processing
Class 6	Styles : Functional vs Procedural
Class 7	Recursive Definitions (Examples)
Class 8	Abstraction : Higher Order Functions
Class 9	Scoping; Closures
Class 10	Java Design Goals
Class 11	Types, Values, Variables
Class 12	Arrays; Classes
Class 13	Midterm (June 10)
Class 14	Inheritance; Polymorphism
Class 15	Interfaces; Packages; Strings
Class 16	Exceptions
Class 17	Threads
Class 18	(continue)
Class 19	(Scripting vs Systems PL)
Class 20	Multiparadigm Languages: Python
Class 21	Multiparadigm Languages: Scala
Class 22	Polymorphic Types : SML
Class 23	Logic Programming
Class 24	SCHEME INTERPRETER (2/3 classes)
Class 25	Code (scm/txt)
Class 26	Hand Written Slides (83M pdf) (43M pdf)
Class 27	Specifying a Language : COOL
Class *	Parameter Passing Mechanisms
Class *	Implementing Subprograms
	Final (July 24)

Assignments (Summer 2013)

- Assignment 1
- Assignment 2

Exams (Summer 2012)

- Midterm
- Final

T. K. Prasad
