

# Food Waste

Paul Dunn, Spencer Boyer, Callie Heiligenberg

## Abstract

The global problem our group is trying to resolve is the substantial issue of food waste in the United States. Though food waste is not a current pressing issue, it needs to be addressed before it has dire effects on our country, agriculturally. We plan to create non-profit company with a goal of educating the youth of tomorrow.

## Point 1

Food waste may not seem like a problem now, but without interference, a major crisis is in our hands. In a day, Americans waste enough food to fill the Rose Bowl football stadium. In a year, according to endhunger.org, the US wastes 133 billion pounds of food.

## Point 2

Its responsible for 135 million tons of greenhouse gasses including methane. Were wasting 300 million barrels of oil and 25% of fresh water to produce the food that is wasted. Food waste will increase as the population grows while farmers desperately try to keep up with an unreasonable amount of people.

## Point 3

Our company represents a non profit organization that aims to educate and encourage the upcoming generation. Meaning we want to teach kids, age 3-10, about the importance of portion control and open mindedness about food that may look different and not pretty.
