

Dr. Ilias Perakis is Professor of Physics and former Chair of the Department of Materials Science & Technology at the University of Crete, Adjoint Professor at Vanderbilt University, and Affiliated Faculty with the Foundation of Research & Technology-Hellas (FORTH). He received his Ph.D. in Physics from the University of Illinois at Urbana-Champaign and joined the Physics Department of Vanderbilt University as Assistant Professor in 1995, after 4 years at Bell Laboratories and Rutgers University.

As an OSA Fellow and recipient of the NSF CAREER award, Prof. Ilias Perakis's expertise concentrates on the theory of *Ultrafast Quantum Manipulation of Complex Materials*, in particular on ultrafast nonlinear phenomena & transient many-body correlations that cross the traditional disciplinary boundaries between physics, materials science, optical science, biology, and quantum chemistry.
