

Global Warming

Group Members: Brittany, Christian, Jordan, Joshua

Abstract

With Fossil fuels being a source of energy the world heavily relies on the damage fossil fuels do to the Earth and the amount left is something that is concerning. People aren't taking an action against global warming for a variety of reasons

How does it affect the planet?

The release of Greenhouse Gases due to human activity causes polar ice caps to melt increasing sea level
Rising temperatures are causing populations of animal species, such as polar bears, to die out

Why don't people take action against it?

There are multiple reasons to why people aren't taking action against Global Warming.

- Fossil Fuels are Cheaper and more convenient than "greener" methods
- Lack of proper media attention Global Warming receives
- People refuse to accept opposing views
- Individual citizens believe they have no effect on Global warming

World Agreements

Kyoto Agreement

- 37 countries were apart of the agreement
- Goal was to reduce 6 main greenhouse gases by 5.2% between 2008 and 2012

Paris Agreement

- 175 countries signed agreement
- Goal was unite the whole world to reduce greenhouse gases
