Arguments for adaptation and continuity will prevail over arguments for mutationnisme, the effect of his argument is not, in fact, to substitute a static "traditional" society for the dynamic social formation posited by mutationists, but rather to reestablish the early twelfth century, rather than the year 1000, as the main turning point in medieval French history. Another effect of his work is to demonstrate both the empirical and the theoretical inadequacy of the conceptual oppositions (e.g., public v. private, legality v. anarchy, slavery v. serfdom, power v. violence, nobility v. knighthood, allood v. tief) out of which previous historians have constructed such a stark contrast between eleventh-century seigneurial society and its predecessors. Because Barthélémy's attack on mutationnisme is based both on an intensive analysis of charter evidence and on a sustained effort to rethink the categories that regional historians of the last forty years have used to construct a model of French society during the central Middle Ages, a model then contrasted with a model of Carolingian society, the book, if properly understood, should leave an indelible mark on the field.

Perhaps taking their inspiration from Angeliki Laiou, who notes that late Byzantine authors usually used "north," "south," "east," and "west" with reference to Constantinople, the editors have organized this festschrift into three sections: the history of the future, present, and past—with Byzantium itself as the starting point. In deference to space limitations, this reviewer will observe his normal procedure of not commenting on every article.

Paul Magdalino, "The History of the Future and Its Uses: Prophecy, Policy, and Propaganda," traces messianic expectations in the Byzantine Empire through good times and bad (e.g., the binge of church building during Justinian's reign can be explained by the need for suitable residences for Christ and the saints, whose arrival was momentarily expected). Walter Hanak, "Some Historiographical Observations on Nestor-Iskander's The Tale of Constantinople," examines how a Slavic narrative of the fall of Constantinople blends and uses a number of eschatological and messianic themes appropriated from earlier sources. Michael Angold's "Were Byzantine Monastic Typika Literature?" concludes this section. A typikon—what a Western medievalist would call the rule book of a monastery—was frequently more than a narrowly legal or liturgical document. It sometimes incorporated the vita of a monastery's founder or its first abbot. Consequently, Byzantine typika on occasion do qualify as literary sources.

Richard Greenfield's "Sorcery and Politics at the Byzantine Court in the Twelfth Century: Interpretations of History" begins the second section by establishing that black magic was not purely a phenomenon among the uneducated, but that there also existed a learned tradition of necromancy among the elite that can be traced to classical sources. Constantine Constantenides' "Byzantine Scholars and the Union of Lyons (1274)" is a careful prosopographical study. Angeliki Laiou's "On Political Geography: The Black Sea of Pachymeres" demonstrates that the Byzantines of the post-1204 period did indeed have some degree of geographical knowledge, though Pachymeres at least seems mainly to have been interested in those areas whose inhabitants directly interacted with the empire, militarily, diplomatically, or economically. Alexis Savides' piece on the tourkopoloi, soldiers of mixed Turkish-Greek parentage who served in both late Byzantine and crusading ar-
cies, is an interesting mixture of military and social history. Michael Kordoses maintains, in the article that concludes this section, that Constantine Palaiologos never had a coronation ceremony in Constantinople for fear of a confrontation between Unionists and anti-Unionists.

The highlight of the final section (which is historiographical—recall that the editors use Byzantium as the center of their universe of reference) is Charlotte Roueché’s biography of Georgina Buckler. Roueché throws light on higher education for women of the middle and upper classes in England at the turn of the twentieth century and concludes that Buckler became interested in Byzantium because it was a Christian state. Her mother had taught herself Greek to read the New Testament, and Georgina’s first Greek readings were also biblical. But Roueché also shows how Buckler, a brilliant scholar whose biography of Anna Comnena is still standard, fell prey to the amateurism characteristic of Anglo-American historiography in the nineteenth century. J. B. Bury, Buckler’s contemporary and a fellow Byzantinist, fought to persuade English historians to adopt a greater professionalism, modeled after the faculties of German universities.

A bibliography of Donald Nicoll’s publications through 1992 is included in the volume.

The Consortium for the Teaching of the Middle Ages (TEAMS) is to be congratulated for producing good quality, inexpensively priced student paperback editions of interesting Middle English texts. Though designed for classroom use, these editions will prove useful as well to scholars in a number of fields who wish convenient access to a range of works “adjacent” in the Middle English canon to those of Chaucer, Gower, Langland, the Pearl poet, and Malory. The introductory and explanatory notes in these volumes are economical but adequate, the marginal and foot-of-page glosses generous and accurate; and though the texts themselves are normalized in spelling and modernized in punctuation, they are based upon otherwise conservative editorial practice. Simple glossaries and select, up-to-date bibliographies have also been supplied.

The first volume reviewed here is Edward E. Foster’s adaptation to the new format of Larry D. Benson’s 1974 edition of the Stanzaic Morte Arthure and the Alliterative Morte Arthure, fourteenth-century poems that were the primary English sources for Malory’s inspired fifteenth-century prose compilation, Le Morte Darthur. These two poems represent competing traditions of the demise of Arthurian Britain, which Malory conflated, in coordination with his French prose sources, to produce what became for later ages the definitive conclusion of the Arthurian legend. The Stanzaic Morte Arthure comprises 3,833 verses in eight-line rhyming stanzas and narrates the increasingly fraught romantic entan-
