The Perpetual Uncertainty of Civil Society: Case Study of an Anti-Hunger Organization in South Africa

Abstract: South Africa has one of the most active civil societies in the world, with more than 85,000 registered civil society organizations (CSOs). However, the growth of CSOs in post-apartheid South Africa does not necessarily imply that the sector is strong. While it is true that the demise of the apartheid regime increased democratic representation within South Africa, CSOs have experienced a series of institutional challenges which have weakened their organizational stability. This has included increased oversight by the state, inefficient and inconsistent funding from government, fickle demands by private donors, and competition from other sectors. Through an in-depth case study of a historically prominent CSO in South Africa, this paper critically analyzes the institutional challenges faced by CSOs in South Africa. Data findings suggest that lack of long-term funding support, ineffective state funding mechanisms, and competition from state programs and new CSOs have resulted in perpetual uncertainty for some CSOs. In all, these institutional problems may have the potential to shrink, destabilize, and limit the viability of South African CSOs. Moreover, this suggests that South African democratization may have simultaneously produced new opportunities for some CSOs, yet reinforced unequal power relations for other CSOs and thus produced a highly polarized CSO landscape.

Keywords: civil society, non-governmental organization, nonprofit, South Africa, food insecurity, hunger

Introduction

As noted by key studies, civil society organizations¹ (CSOs) have increased across the world (Lewis 2001; Salamon 2010). Similarly, the growth of CSOs in South Africa has been rapid with over 85,000 registered CSOs (Department of Social Development 2012b). South African CSOs contribute \$1.7 billion annually to the economy, accounting for 1.3% of the country's GDP (Swilling, Russell, and Habib 2002). Although South African civil society is small when compared to North America and Western Europe,² South African civil society is the largest in Africa and second largest in the Global South (Salamon, Sokolowski, and List 2004).

However, the growth of CSOs has not ensured that the sector is strong, as South African CSOs remain significantly polarized by race and income (Warshawsky 2013, 2014). While the demise of apartheid increased democratic representation within South Africa, CSOs have been confronted with lack of financial and human resources and at times, an antagonistic central state³ (Camay and Gordon 2001; Umhlaba Development Services 2005). Although these problems are sometimes attributed to the growing pains of a young democracy, others argue that these struggles point to fundamental institutional challenges and limited impacts of CSOs in South Africa (Bond 2006; Desai 2002). These scholars contend that there is a direct relationship between the sector's size and its fragmentation and ineffectiveness, as societal inequality has both facilitated the growth of CSOs yet also limited their capacity to operate. As noted by numerous key scholars (Bratton 1989; Swilling, Russell, and Habib 2002; Young 2000, 2006), CSOs maintain important roles to both supplement state programs and ensure state accountability. Yet, although more than one billion Rand is spent each year to fund South African CSOs (Swilling et al. 2004), it is unclear whether CSOs are capable of producing expected outcomes to reduce poverty, empower neighborhoods, and democratically represent communities. While the state, private sector, and CSOs all vie to maximize their institutional autonomy in relation to each other (Bratton 1989), CSOs are arguably in the

1 African civil society is a fluid, relational, and socially constructed concept historicized in local contexts (Tostensen, Tvedten, and Vaa 2001).

2 These countries often have civil societies with 2–3 times the percentage contribution to country GDP (Salamon, Sokolowski, and List 2004).

3 The state is a product of the country's colonial and apartheid history (Terreblanche 2002). While it has devolved governance to local institutions (Rogerson 2004), state formation reflects the complexities of extreme socio-spatial segregation unique to South Africa (Pieterse et al. 2008).

weakest position, since they rely so heavily on funding from other institutions (Swilling, Russell, and Habib 2002; Warshawsky 2014).

Through an in-depth case study of a historically prominent CSO named Operation Hunger (OH), this paper critically analyzes the institutional challenges faced by CSOs in South Africa. To this end, two research questions drive this study. First, what is the organizational structure of OH, and how has this contributed to its current institutional crisis? Second, what do these findings suggest about the viability of South African CSOs more broadly? To answer these research questions, this paper analyzes key institutional reports from 1980 to 2012 and in-depth interview data from 2007 to 2012. This includes interviews of administrators, managers, fieldworkers, and community stakeholders working at OH, government departments, private donors, and partner CSOs.

Overall, data in this paper point to problematic findings. Given that OH has operated for over three decades, OH represents an outlier or best case scenario CSO in South Africa, since most CSOs never last more than a few years. However, as discussed in this paper, severe institutional challenges,⁴ including lack of long-term donor support for welfare-oriented projects or human capital, ineffective state funding mechanisms, and competition from state programs and new CSOs, have forced OH to the brink of closure.

The structure of the paper is as follows. After discussing the history of state–CSO relations in South Africa, post-apartheid CSOs in South Africa, and methods used, this paper critically analyzes OH as a case study. While OH does not reflect the entirety of CSOs in South Africa, findings point to institutional problems which may impact the sector at large.

The history of state–civil society relations in South Africa

South African CSOs reflect the diversity of African, European, and Asian peoples who have inhabited the country over the centuries. Although these groups interacted at times, racist policies and uneven financial support ensured that CSOs would be polarized, fragmented, and unstable (Greenstein, Heinrich, and Naidoo 1998). During the apartheid regime from 1948 to 1994, polarization of CSOs was especially pronounced as the apartheid state encouraged white-run CSOs and systematically suppressed non-white CSOs, especially those

⁴ Institutional challenges are defined as issues that weaken the financial sustainability, mission, programs, or structure of an organization (Swilling, Russell, and Habib 2002).

associated with unions or political movements (Swilling, Russell, and Habib 2002). After the 1976 Soweto uprising, CSOs played important social service and community organizing roles as part of the anti-apartheid movement. Increased involvement of young activists and international resources empowered CSOs in the anti-apartheid struggle (Habib and Taylor 1999).

With the development of a democratic South Africa in 1994, the post-apartheid state started to incorporate and institutionalize CSOs (Habib 2005). In particular, through the passage of new policies, including the 1996 Growth, Employment, and Redistribution (GEAR), 1998 White Paper on Local Government, and 2000 Municipal Systems Act, the South African state devolved and decentralized key economic and poverty functions to local institutions (Department of Finance 1996; Department of Provincial and Local Government 2000; Republic of South Africa 1998b). These policies have promoted local economic development (LED) through a process of integrated development planning (IDP) that balances economic growth and poverty alleviation, emphasizes local control and flexibility, and includes institutions across scales and sectors (Rogerson 2004). Through the Nonprofit Organisations Act of 1997, Lotteries Act of 1997, and National Development Agency Act of 1998 (Republic of South Africa 1997a, 1997b, 1998a), the South African government formally institutionalized CSOs into society.

However, while the state decentralized state powers to break apart apartheid institutions and increase local control, these shifts have increasingly placed pressure on CSOs to reduce inequality and promote development (Bond 2000). In addition, according to recent studies (Camay and Gordon 2001; Swilling, Russell, and Habib 2002), CSOs have been forced to find new funding sources, hire skilled staff, and reinvent organizational mission, as apartheid era flows of money and people to CSOs ended once the apartheid regime imploded in 1994. Moreover, antagonism between the state and CSOs has increased, as many CSOs have become dissatisfied with the state's registration processes, funding mechanisms, and development course. In this way, both the state and CSOs have seen each other as competing powers or bureaucracies struggling over the future of South Africa (Bratton 1989; Young 2000, 2006).

Most recently from 2007 to 2012, state–CSO tensions have flared over recent registration changes and policy shifts initiated by the Department of Social Development (DSD). While the national Nonprofit Organisation (NPO) Register is always in flux due to turnover, the DSD has taken an active approach to ensure NPO compliance (Bok 2012; Department of Social Development 2012a). In early 2012, this resulted in the forced deregistration of 23,000 NPOs and flagged non-compliant status of 35,000 NPOs (Barnard 2013). According to the DSD, these 58,000 organizations failed to provide the paperwork required by law.

However, numerous complaints regarding the nature of this deregistration process resulted in the re-registration of all organizations in February 2013 on the condition that organizations provided paperwork within six months.

Due to this deregistration crisis, the DSD is developing a new Policy Framework on Nonprofit Organisations Law to codify important changes to NPO registration and oversight procedures (Department of Social Development 2012b). This includes the creation of the South African Nonprofit Organisations Regulatory Authority (SANPORA) to register, monitor, guide, sanction, and prosecute non-compliant Organisations. While the major goals of the 1997 Nonprofit Organisations Act were to develop a supportive and enabling institutional environment, the Policy Framework on Nonprofit Organisations Law emphasizes enforcement and regulation of registered NPOs. Since this law is only a working document at this point, it is unclear how the policy will be finalized. In the meantime, many activists and legal scholars are concerned about its implications given its potentially punitive orientation (Wyngaard 2013).

Conceptualizing post-apartheid civil society in South Africa

Due to the persistence of socio-economic inequality and lack of confidence in the state to improve people's lives, CSOs have grown rapidly since 1994 (Ballard et al. 2006; Desai 2002). According to DSD, 85,039 registered NPOs exist as of June 2012 (Department of Social Development 2012b), almost double the number from 2006. As the largest in Africa and second largest in the Global South, South African CSOs are a R9.3 billion industry (\$1.7 billion) with 645,316 workers, accounting for 8.7% of the non-agricultural workforce (Swilling, Russell, and Habib 2004). South African CSOs are funded by government (44%), fees (32%), and philanthropy (24%), with most of this funding flowing to organizations focused on social services (26%), development/housing (18%), and culture/recreation (18%). Most South African CSOs are small, as 80.5% have 10 or fewer employees.

In line with Habib (2005) and Habib and Kotzé (2003), contemporary South African CSOs include non-governmental organizations (NGOs), community-based organizations (CBOs), and social movements (SMs). First, NGOs operate programs in line with donor priorities (Warshawsky 2013, 2014). Funded by private donors and located in white, upper-middle class communities, NGOs have budgets over \$50,000 per month and at least 15 full-time staff. Due to their visibility and long institutional histories, NGOs are well-positioned to access

corporate funding as a way to compensate for inadequate or inefficient public funding (Friedman, Hudson, and Mackay 2008). Second, CBOs operate basic-need programs (Warshawsky 2013, 2014). Funded by community members and located in black, lower-income communities, CBOs have budgets under \$1,000 per month with few if any full-time staff. Since CBOs are dependent on resources from community members, their closure rate is high. Third, SMs contest the state and capital as a way to promote social, economic, and environmental justice. For this reason, they are managed and operated by volunteers, less formalized than NGOs or CBOs, and more aggressive in their tactics (Ballard et al. 2006; Desai 2002).

Methods

To start, I analyzed OH's annual reports and institutional documents to highlight OH's budget size and composition, program types, and philosophical orientation toward programming. Next, I conducted 19 interviews⁵ with administrators and fieldworkers affiliated with OH from 2007 to 2012.⁶ Although open-ended, interviews identified the institutional operations, funding sources, and structure of OH. When possible, I went to program sites to examine projects and interact with community stakeholders.

Also, 13 in-depth interviews⁷ were conducted with key government administrators, private sector donors, and managers of CSOs affiliated with OH from 2007 to 2012.⁸ In these interviews, I examined the institutional collaboration and conflict between OH and its partner organizations. Interviews with government administrators highlighted the motivations behind food policies and state–CSO relations. In addition, interviews with private sector donors revealed impetus for supporting CSOs such as OH, while interviews with affiliated CSOs provided insight into OH from a different place within the organizational delivery network.

5 In-depth interviews were conducted at institutions 9am–5pm, Monday–Friday. Although standard protocol guided interviews, question format was exploratory. Interviews were recorded and transcribed with agreement from the interviewee. All interviews were cited in the same manner (interviewee role, institution, date). As multiple interviews were completed on the same day, many interviews have the same interview date. Interviews were edited for grammatical clarity when necessary.

6 This time period allowed for analysis of OH's institutional instability across different staff tenures and years after the 2008–2009 global recession.

7 See note 5.

8 See note 6.

Following completion of these interviews, data were transcribed, collated, and classified by interviewee type, organization, and quotation content. Then, interviews were analyzed with a methodological triangulation which positioned interviews in relation to the comments made by other people within similar roles at other institutions (Miles and Huberman 1994). In line with Mitchell (1983), Sayer (1992), and Yeung (1997, 2003), interview data were analyzed to generalize about the causal mechanisms and power relations reproducing perpetual institutional crisis at OH.

Operation Hunger: institutional history, mission, structure, and programs

Since 1980, OH has been headquartered in Germiston, Gauteng, near Johannesburg (Figure 1). OH currently serves 19,193 people across South Africa's nine provinces through programs which nourish the poor and sharpen their entrepreneurial and

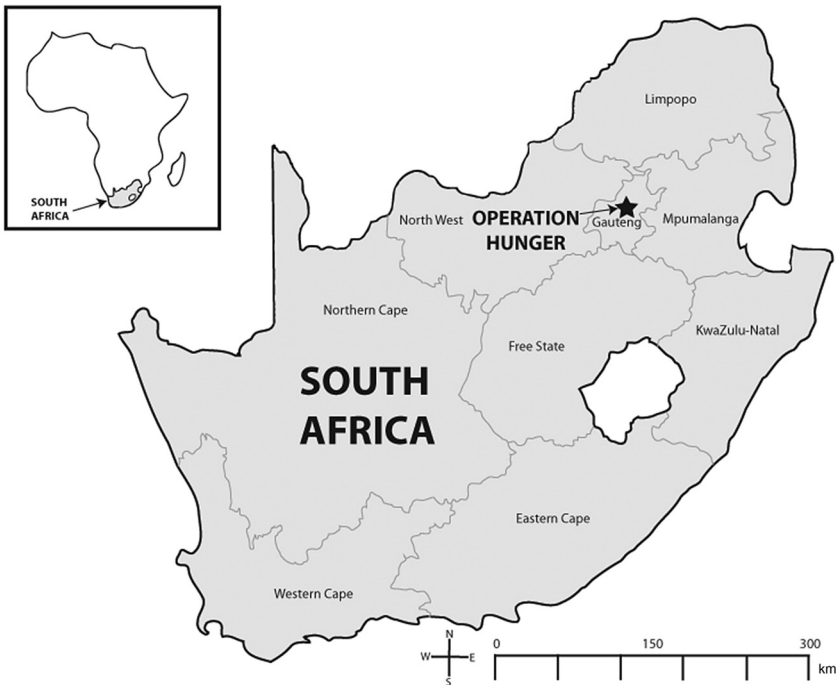

Figure 1: The headquarters location for Operation Hunger

job skills (Operation Hunger 2013a, 2013b). Even though OH's constitution specifies that a board of trustees elects management to run the organization's daily operations, the national, regional, and community offices are led by paid staff and numerous volunteers (Operation Hunger 2013a).

While OH remains an anti-hunger CSO, it changed its institutional mission in 1994 to fall under the five-part mission of development, nutrition, relief, water, and wellness (Operation Hunger 2008). However, this shift was not completely voluntary as CSOs were forced to reinvent their mission following key shifts in funding.

As (the South African) government took over (in 1994), funders from abroad (stated) that they would support the (new) democratic government and no longer channel funding to NGOs. If NGOs needed funding, they would need to contact the government. So, for many NGOs, this was their downfall, because NGOs would not get support if they were repeating a government program. Therefore, as OH, when we saw that we were (duplicating government programs), we realized that we needed to (broaden our mission). (Administrator, Operation Hunger, August 8, 2008)

Importantly, OH's mission shift was not sufficient to prevent a substantial size reduction in OH's operating budget (Figure 2). OH's budget has shrunk from R84,092,664⁹ in fiscal year¹⁰ 1989–1990 to R6,709,058¹¹ in fiscal year 2011–2012, although the operating budget was as low as R2,686,788¹² in fiscal year 2003–2004. While OH once received substantial donations from a range of donors, these streams of money permanently stopped during the mid-1990s. In the 2011–2012 fiscal year, OH's operating budget was comprised of large funding from domestic food corporations such as the SPAR Group (R1,500,000¹³) and domestic and international government agencies, such as the South African Lottery (R2,800,000¹⁴), Irish Aid (R1,200,000¹⁵), and USAID (R373,000¹⁶). As is discussed in the following section, funding inconsistencies are centrally related to OH's current budget crisis.

⁹ Figures compiled from key publications (Operation Hunger 1996, 2005, 2006, 2007, 2008, 2009, 2010, 2011, and 2012 and interviews 2007–2012). All Rand values are constant inflation adjusted values based on the 2011 exchange rate of R7.26 to \$1.

¹⁰ Fiscal year is April 1–March 31.

¹¹ See note 9 for constant Rand value normalization.

Operation Hunger: institutional crises

OH has faced major institutional challenges during its existence. The first series of crises started in the early 1990s when high-level OH administrators misappropriated money for personal gain (Administrator, Operation Hunger, June 3, 2009). Those responsible for the misdeed were fired; however, the subsequent lack of institutional legitimacy resulted in reduced funding for years.

In 1992, there was fraud in Operation Hunger. It involved some of the senior people. They set up a mill that didn't exist that fed maize and stuff to a village. It was over a million Rand that had gone into different directions. In addition, the board at that time did not do a proper full police investigation, and so it looked like a cover up. So, a number of the donors started querying things. (Administrator, Operation Hunger, June 3, 2009)

In addition, the timing of this fraud crisis was particularly poor, as donors began channeling their money away from CSOs once apartheid ended (Administrator, Operation Hunger, August 8, 2008).

(With the end of apartheid) in 1994, many donors stopped giving to NGOs and gave to government. That hit Operation Hunger quite hard (since we were already dealing with the fraud crisis). It has taken quite a long time to get the debt written off, with lots of negotiations. (Administrator, Operation Hunger, June 3, 2009)

Arguably, OH was able to successfully negotiate itself through these crises by ensuring stronger internal governance procedures and recasting its mission as a development CSO. In addition, OH has produced annual reports and in-depth audited financial reports yearly since the crisis to ensure organizational transparency and accountability.¹⁷ While it is unquestionable that OH has never reclaimed the funding it had before these crises in the 1990s, it had recovered its reputation as a legitimate organization by the late 1990s–early 2000s.¹⁸

However, by 2012, OH was facing the prospect of severe program reductions or even closure. There are a number of reasons for OH's current existential crisis. Most fundamentally, OH has struggled to find donors interested in funding its mission, since many donors see OH as a feeding organization only.

I must tell you that most donors don't give direct feeding money. What they will do; however, is that they will give money for (what they see as development projects, so) we seldom do handouts. In the old days, you had a truckload of stuff, and you just handed out food. (Administrator, Operation Hunger, March 12, 2009)

Finding donors has been a bit of a challenge. There are still very few who have an interest in funding those organizations who work on malnutrition. (Administrator, Operation Hunger, August 6, 2012)

This has been especially difficult, since donors often believe government is the purveyor of welfare programs and supplemental CSOs like OH which fill gaps in state services are simply redundant or competing with these services (Young 2000, 2006).¹⁹

Most donors think that (government grants) are somehow addressing households' basic needs. But, is that adequate enough for them to survive for a month? I don't think so. Our programs are coming in to bridge that gap. (Administrator, Operation Hunger, August 6, 2012)

Although OH attempts to rebrand itself through word-of-mouth and its annual reports, OH does not actually have any full-time marketing staff. This has reinforced its visibility problem and thus worsened its already existing funding problems:

One of the main challenges we are facing (as an organization) is marketing and (this is because) we don't have the funding to have an actual (marketing) person. Nobody knows

¹⁷ Although unevenly regulated, the state has required CSOs to report their financials since 1997.

¹⁸ This fact has been cross-checked with numerous CSOs.

¹⁹ The South African government spends more than R118 billion yearly on welfare (South African Treasury 2009).

about OH sometimes. I mean some people say “OH are you still there?” (Administrator, Operation Hunger, August 6, 2012)

Even when donors support OH’s projects, donors typically loathe to fund administration costs. This has resulted in poorly trained fieldworkers and community members, and eventually projects suffer:

One of the challenges at OH is limited training, because of the lack of funds. Our (projects) work, because we train participants on the ground. Donors often don’t want to cover administrative costs and salaries. (Administrator, Operation Hunger, August 6, 2012)

While the challenge to cover administrative costs is common across the sector as many donors view it as an inefficiency or waste of money (Bebbington, Hickey, and Mitlin 2008), it is especially punishing for CSO such as OH which are already on the brink of closure.²⁰

Equally problematic, private funders often want to see the outcomes immediately with measurable results, even though projects are often tied to multiple issues or take years to produce results.

Many (donors) give us funding to tackle only one aspect of the problem in the community. (However), you cannot measure whether you have had an impact in that community without (long-term funding). They also want to see that you have brought about changes in that community. When they cannot see any change, they do not really want to continue funding. (Administrator, Operation Hunger, August 8, 2008)

To offset funding shortfalls and partial service coverage, OH has partnered with other food-oriented CSOs. However, this has also resulted in partner CSOs’ failures becoming OH’s problems.

We used to get so much (food from our partner NGOs). We had to take more than one vehicle and it was huge, massive amounts. And, slowly, it started to dwindle and then it went down completely. (Administrator, Operation Hunger, August 6, 2012)

In addition, donors, especially government, are supportive of the fast growing numbers of NPOs at the expense of OH:

The mushrooming of NGOs (is a key problem for us, since funders) have to spread their resources across and also reduce allocation to those that have been with them for a longer period. Unfortunately, for the older NGOs, the focus of donors and

²⁰ OH’s 10% administrative costs are average compared to similar organizations (Camay and Gordon 2001).

government (is to fund these new organizations). (Administrator, Operation Hunger, August 6, 2012)

To maximize its chances at success, OH has tried to “sell” its project ideas to government to ensure that the relevant South African departments visualize their programming and know OH’s management team.

The only ways we could make a mark with government is (to show) what we can do. When they see the result of our intervention, (they realize that) NGOs can also make a mark in terms of community development. There is this mentality in government that government (is the one) that can actually address problems. (For this reason), NGOs are ignored. (Administrator, Operation Hunger, August 6, 2012)

These comments reinforce the idea that supplemental CSOs which fill gaps in state services are redundant and ripe for cooptation or dissolution (Bratton 1989; Young 2000, 2006). As noted by Desai, Maharaj, and Bond (2011) and Bratton (1989), the degrading of CSOs is key to reinforcing the state’s legitimacy as the key service provider.

In addition, lack of follow through on government funding is a perpetual problem.

We had money promised to us through the (government funding agency called the) NDA. We still have funds outstanding from them. We even had a contract signed and everything. (Administrator, Operation Hunger, August 8, 2008)

(The government) has not called for applications now (for two years). We keep checking and they haven’t called (for applications), but they won’t say why and you cannot get an answer from them. (Administrator, Operation Hunger, August 6, 2012)

This is quite concerning as it challenges the notion that there is a place for complementary CSOs which can actually successfully work with and be funded by government (Young 2000, 2006). Moreover, it remains unclear to what extent the South African state views CSOs as being anything other than adversarial (Bond 2006).

The lack of government funding would not be a death blow to OH; however, OH has been unable to secure funding from any sector. Private donors support OH in smaller amounts than ever before in their institutional history. Donor concern about OH’s mission calls into the question the long-term fundability of food-oriented CSOs like OH. In addition, government funding is often late, inconsistent, or directed toward newer CSOs. This has only led to a spreading of fewer resources to more organizations. Also, while OH has used managerial ingenuity to partner with other relevant CSOs, OH’s problems have sometimes been compounded by its weak institutional partners. Clearly, OH’s future is very uncertain.

Discussion and conclusion

This paper has analyzed the viability of South African CSOs through the lens of OH. In theory, the state promotes policies which institutionalize, legitimize, and fund CSOs, private sector funds CSOs, and CSOs complement state programs and monitor the state to ensure accountability (Swilling, Russell, and Habib 2002). However, the experiences of OH suggest that these dynamics have only been partially realized. OH is now on the brink of closure, due to lack of long-term donor support for welfare programs or human capital, ineffective state funding, and competition from state programs and new CSOs. Although some of these problems may be specific to OH, data in this paper support claims from other studies which indicate that lack of resources and weak or antagonistic relationships with partner organizations result in institutional instability among CSOs (Swilling, Russell, and Habib 2002), inadequate CSO service delivery (Warshawsky 2014), and ineffectual social movements (Ballard et al. 2006). If OH, an organization with a long-standing in South Africa, closes, the prospects for other CSOs with similar historical backgrounds and circumstances may be uncertain.

As noted by scholars, CSOs maximize their autonomy by keeping a low profile, selective collaborations, increasing membership fees, and growing private fundraising (Bratton 1989; Salamon 1999; Smith 2012). However, as noted through the case study of OH, this is not easily achieved, as OH has found its autonomy limited by its low or misunderstood profile due to the fraud crisis from the 1990s and its representation as a “welfare” organization. In addition, the success of its institutional collaborations has been mixed as its funders and partner NGOs have not always come through with results. Also, while OH is reluctant to implement membership fees due to the fragility of its partners, OH has pursued private fundraising and corporate partnerships. However, without human resources or time to network or market their organization, OH has been unable to access significant private resources. Although scholars have highlighted the risks of CSO commercialization as mission is often compromised at the expense of institutional self-perpetuation (Grønbjerg and Salamon 2012; Salamon 1993, 2012; Young, Salamon, and Grinsfelder 2012), administrators at OH are keen to remarket their organization to ensure its financial sustainability. In this way, self-perpetuation concerns are viewed as secondary to financial sustainability.

Most importantly, CSO autonomy is often limited by the state, private sector, and other CSOs. Foremost, this includes state control through monitoring, organization cooptation, and state penetration as the state actively seeks to

control potentially adversarial or competitive CSOs (Bond 2006; Bratton 1989; Wolch 1990). In the case of OH, government decisions not to fund OH projects, identify OH programs as in competition with state programs, fund “development” oriented CSOs or new CSOs only, and not provide promised funding, have collectively hurt OH. In addition, corporations have the potential to influence the mission or stability of CSOs (Bond 2008). As noted in this paper, private donors have influenced OH’s mission to become more developmental in order to receive funding; yet, they continue to mandate that money be spent on certain programs or for shorter time periods than needed. Lastly, competition from new CSOs has increased competition for funding (Mohan 2002), as state and private funders have chosen to fund newer upstart CSOs over long-standing CSOs like OH.

In all, these trends point to broader challenges for South African CSOs. While some CSOs in South Africa have developed creative ways to access funding as noted above, it is uncertain whether funding streams are consistent or sufficient to sustain CSOs. Building on the work of Bond (2006) and Habib and Kotzé (2003), I argue that CSOs’ polarization and institutional instability is not simply the result of restricted CSO autonomy (Swilling 2002). Rather, the struggles of South African CSOs, such as OH, reflect CSOs’ financial and political dependencies on the state and private sector.

Using the influential heuristic developed by Young (2000, 2006), South African CSOs can be understood as either adversarial (in opposition), supplementary (in addition), or complementary (in cooperation) to the state. In South Africa, adversarial CSOs played a key role in destroying apartheid and have continued to actively pressure the state, with no sign of diminishing (Ballard et al. 2006; Desai 2002). Supplementary and complementary CSOs have always been part of the South African social fabric, with the growth of complementary CSOs notable in the post-apartheid years as the state has funded many CSOs (Swilling et al. 2004). Importantly though, OH’s struggles may be indicative of a weakening supplementary CSO sector, as the central state has actively funded certain complementary CSOs at the expense of some supplemental CSOs. This has been compounded by private donors’ move away from many South African supplemental CSOs and increased competition from the growing number of supplemental CSOs. Overall, this suggests that South African democratization may have simultaneously produced new opportunities for some CSOs, yet reinforced unequal power relations for other CSOs and thus produced a highly polarized CSO landscape.

To maximize OH’s viability, OH should hire skilled staff to pursue funding and development opportunities, institutional partnerships, and marketing promotions in different sectors both domestically and abroad. Domestic and

international donors can also enable the success of CSOs like OH by reducing limits on administrative spending, allow more time to implement projects, and recognize the value in food-oriented CSOs like OH. Most importantly, the South African state should increase funding to more CSOs, embrace CSOs which supplement government programs, and pay CSOs on time. While one should not exaggerate the potential of CSOs to effect social change or achieve development goals (Born and Purcell 2006; Mohan and Stokke 2000) and must not romanticize CSOs as post-political institutions (Bebbington, Hickey, and Mitlin 2008; Ferguson 2006), CSOs like OH make significant impacts when they operate at their maximum effectiveness.

While OH may operate for a few more years, it is unlikely that OH will persist for multiple decades unless it can secure long-term funding. If CSOs like OH close their operations, pressure on the state may intensify to fill these gaps. To some extent, this has already been seen as social protest and political instability have increased in the lead up to the 2014 general elections (Hart 2014). In addition, although the South African state spends 14% of GDP or R118 billion yearly on welfare (South Africa National Treasury 2009), one of the highest rates in the Global South (World Bank 2008), pressure on the state to increase social welfare spending continues to persist (Desai, Maharaj, and Bond 2011). It is unclear that these expectations can be met in the coming decade, as poverty and social inequality endure (Desai, Maharaj, and Bond 2011; Hart 2014)

To examine whether OH reflects the experiences of other CSOs, future studies should analyze the web of institutional relationships which shape how CSOs operate in particular contexts. While some CSOs prosper due to their connections to global flows of information, money, and support (Bond 2008; Warshawsky 2011), other CSOs lack the capacity or knowledge to strengthen their institutions or serve their communities (Swilling, Russell, and Habib 2002; Warshawsky 2014). Importantly, future research could highlight the institutional choices available to CSOs in different socio-political contexts.
