Repository Citation

This Syllabus is brought to you for free and open access by the College of Engineering & Computer Science at CORE Scholar. It has been accepted for inclusion in Computer Science & Engineering Syllabi by an authorized administrator of CORE Scholar. For more information, please contact library-corescholar@wright.edu.
CEG 720 Computer Architecture I

Fall Quarter, 2009

Catalog Data: Review of sequential computer architecture and study of parallel computers. Topics include memory hierarchy, reduced instruction set computer, pipeline processing, multiprocessing, various parallel computers, interconnection networks, and fault-tolerant computing.

Prerequisite: CEG633, or CEG520 and CEG611
Prerequisite Topics: Process management, CPU scheduling, Memory management, Cache management, Disk management. If not familiar with these topics, take CEG433/633 (Operating Systems) first.

Instructor: Dr. Soon M. Chung, 403 Russ Engineering Center (937-775-5119)
soon.chung@wright.edu, http://www.cs.wright.edu/~schung

Class: M. W. 6:05-7:20 pm at 157 Rike Hall

Office hour: M. W. 2:30-3:30 pm at 403 Russ, or by appointment.
*use e-mail for short questions.

References:

Topics: Overview of computer architecture and parallel processing
Processors and Memory Hierarchy
Bus, Cache, and Shared Memory
Interconnection Networks
Pipeline and Superscalar Techniques
Multivector and SIMD Computers
Multiprocessors and Multicomputers

Grading:
A:[85.100], B:[75,85), C:[65,75), D:[55,65), F:[0,55)
Midterm 30% (10/19, M.)
Final 40% (11/18, W., 8:00-10:00 pm)
Paper-review project 30% {papers referenced 7%, report organization 6%, written presentation 8%, discussion 9%}
CEG 720 Project

1. Choose a topic and select at least 5 relevant technical papers. High-quality journal papers are preferred.
2. Summarize and compare the papers, and then add your own discussion.
3. Submit the working title and the list of candidate papers. (due 10/26)
4. Present in the class (?), and submit the report and the papers you studied. (due 11/18)
5. Size of the report is between 25 and 35 double-spaced pages.
6. This project can be done as an individual project or a team (of two) project.

Possible Topics
- Multiprocessor cache management
- Multicore processors
- SIMD, MIMD machines
- Fault tolerant computing
- Parallel algorithms
- Performance evaluation of parallel computers
- Interconnection networks
- Cluster computing
- GRID computing
- RISC/CISC processors
- Reconfigurable array of processors
- Optical computing
- Application specific architectures
- Realtime computer systems
- Artificial neural network
- Other relevant topics

CEG 720 Computer Architecture I

Prerequisite Test

Briefly answer the following questions.

1. What is the definition of a process?

2. List a couple of CPU scheduling algorithms and explain how they work.

3. Explain the paging memory management scheme and the role of a page table.

4. Explain a couple of cache block replacement algorithms.
