Abstract

Many websites provide a medium for individuals to share their experiences and knowledge about drugs. This study investigated the online discussion of loperamide, a piperidine-based non-opioid medication approved by the U.S. Food and Drug Administration for the control of diarrhea symptoms. Because of its non-opioid properties, loperamide is considered to have no abuse potential and is available without a prescription. To date, little is known about the extra-medical use of loperamide among illicit opioid users. This content analysis study examines self-treatment of opioid withdrawal symptoms using loperamide.
